

Managing Sustainability with Microsoft

08/19/22

Our 2030 All Life sustainability plan is not only robust with more than 40 milestones across three pillars—Everyday Life, Planet Life, and Connected Life—but contains ambitious goals, including sustainably sourcing 100% of our priority crops (corn, tapioca, potato, stevia and pulses) by the end of 2025. To help us in our efforts, we have partnered with Microsoft Cloud for Sustainability which provides an opportunity to get data analytics that enables more insightful and timely business decisions. Microsoft Cloud for Sustainability helps us inform our decision-making which ultimately helps us achieve our carbon reduction goals.
